Guides	152-156
FAQ's & Contact Us	157

This Homeowner Sales Catalogue is a product and design guide, featuring our most frequently requested items, to assist you in selecting the perfect kitchen solutions.

If you do not see the item you require, please email our Sales Team:

cse@roundelkitchens.co.uk

When enquiring, please provide the following details:

Plot Number:	
Housing Builder Name:	
Site Name:	
House Type:	

These details will enable our Sales Team to locate the property's job number. The job number corresponds to the original order placed by the housebuilder and allows us to identify the specific ranges installed in your property.

The job number can also be found on the QR code inside the kitchen sink cabinet.

If you already know your property's job number and the required ranges, you may complete the order form on pages 5-7 and email it to **cse@roundelkitchens.co.uk**.

Alternatively, enquiries can be submitted via our website:

<https://www.roundelkitchens.co.uk/new-build-homeowners>

Step 1 - Identify the cabinet specification required

Pages 8-9

Add this to the order form

Step 2 - Identify the range name and colour required

Pages 10-12

Add this to the order form

Step 3 - Identify the handle required

Pages 13-14

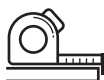

Add this to the order form

Step 4 - Select the products required

Add these products to the order form remembering to include any customisation requests such as drilling for hinges and handles.

Unless otherwise stated, cabinets are supplied fully assembled (not flat-pack) and include hardware components for installation.

Please note that customised goods can't be refunded as they are manufactured to order. Customisation includes the drilling of doors and cabinets for hinges, fixings and handles.

Key for symbols used:

To discuss customising this cabinet please contact the Sales Team for further information.

Related Accessories

Installing a hob separator panel provides a vital safety barrier between the hob and the cabinet below.

The panel prevents direct contact with the underside of the hob when accessing drawers, eliminating the risk of burns or accidental damage. It also acts as a thermal shield, reducing heat transfer to the drawer space and protecting stored items from excessive temperatures.

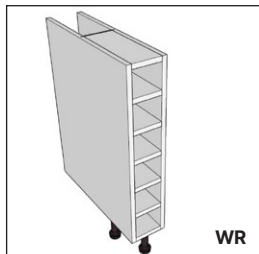

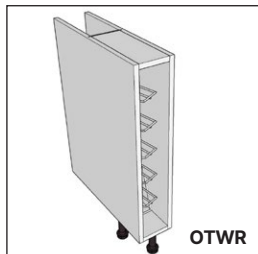

This ensures both safe operation and prolonged durability of surrounding cabinetry.

Built Under Single Oven

Standard Base Cabinet -
Height: 720mm
Depth: 570mm

BO

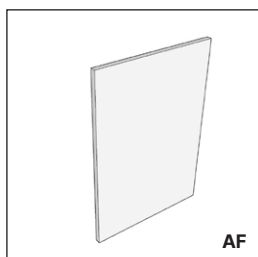

Cabinet Width - Single	600
Single Oven Base Cabinet Code	BO060

The BO060 is supplied with a 140mm high filler panel, this is used on site to reduce the aperture height. In this example the filler panel has been split. 150mm high adjustable plinth legs are supplied.

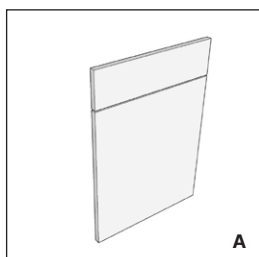

Hob separation panels are not required for the BO060.

A built-under double oven typically measures between 700mm - 720mm in height, designed to be freestanding (housing not required). While the height is generally consistent for the built-under style, always verify the specific dimensions of the appliance.

Integrated Appliance Frontal

AF

Drawerline Drawer -
Height: 140mm

Door Width	450	600
Integrated Appliance Frontal Code	F45AF	F60AF
Integrated Appliance Frontal Code	F45A	F60A

Integrated dishwashers, washing machines, tumble dryers, under counter fridges and freezers don't require a housing (cabinet) they fit in between two other units or plant on end panels.

The template and hinges required to hang the frontal are supplied with the appliance. We can't supply hinges for integrated appliance frontals.

Integrated appliance frontals include a handle. Please note that frontals are not drilled for handles and handles are supplied loose (excluding Croft, Dakar and Fruin which have integrated handles).

Integrated appliance gaps need to be 600mm wide (450mm for a slimline dishwasher), if the gap is bigger/smaller, you may require additional materials.

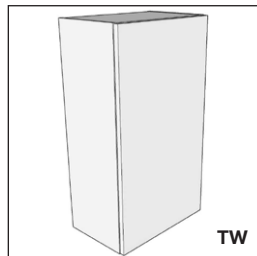

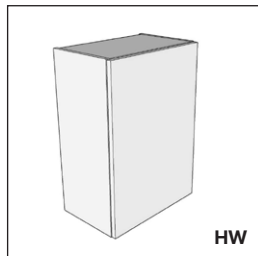

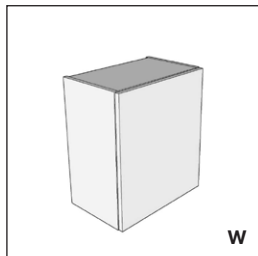

Gaps can be reduced to 600mm wide (445mm for a slimline dishwasher) using a variety of methods.

TWBST050_400	TWBST060_400

Boiler wall housings are supplied in flat-pack form, for on site assembly using Rafx fittings and include one door, a handle and Blum hinges.

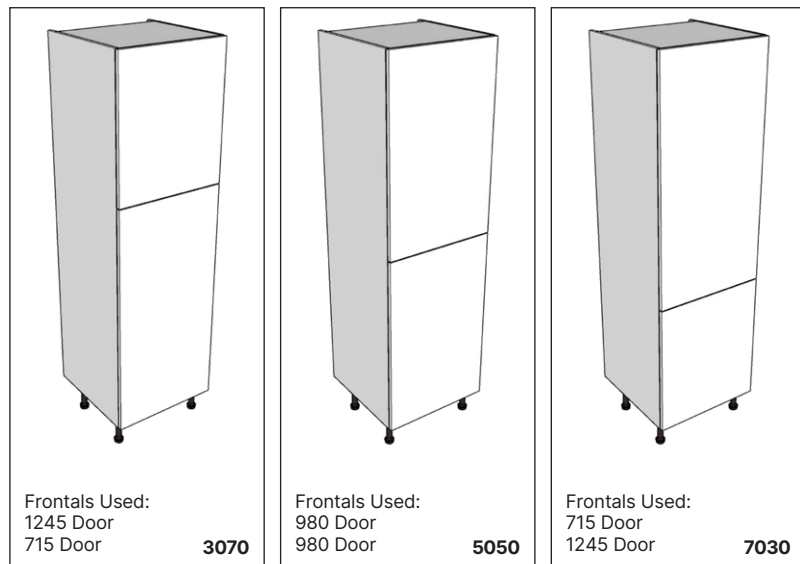

Unlike wall cabinets, boiler housings don't have a built in top or bottom section due to ventilation requirements. When ordering cornice or decor board to 'box-in' pipes please ensure the boiler ventilation requirements have been adhered to.

If you would like us to drill the door and cabinet for hinges please request this customisation on ordering. Please note that doors are not drilled for handles and handles are supplied loose (excluding Croft, Dakar and Fruin which have integrated handles).

Boiler wall housings are supplied as left or right hand hinged. Left hand hinged means the hinges are on the left side of the cabinet and the left side of the door (viewed from the front).

Measurements are in millimetres. Unless otherwise stated cabinets are supplied fully assembled (not flat-pack) and include hardware components for installation. Cabinet heights exclude the 150mm high adjustable plinth leg dimension.

HBR030_7030	HBR040_7030	HBR050_7030	HBR060_7030

As standard HL larder cabinets are supplied with three fixed and two adjustable shelves. Measuring up from the base of the cabinet the shelves are fixed approximately at 715mm, 980mm and 1245mm. The larder is drilled for adjustable shelves in the lower and upper sections.

As standard HBR broom cabinets have one fixed shelf located approximately 1613mm from the base of the cabinet. The cabinet is drilled for adjustable shelves but none are supplied. Additional adjustable shelves and shelf pegs can be purchased separately, for further information please refer to page 55.

Larder and broom cabinets are supplied with two doors, two handles, Blum hinges and 150mm high adjustable plinth legs. As standard these items are not attached to the cabinet and need to be installed by your trades person. If you would like us to drill the doors and cabinet for hinges please request this customisation on ordering.

Larder and broom cabinets can be supplied as left or right hand hinged. Left hand hinged means the hinges are on the left side of the cabinet and the left side of the doors (viewed from the front).

Please note that doors are not drilled for handles and handles are supplied loose (excluding Croft, Dakar and Fruin which have integrated handles).

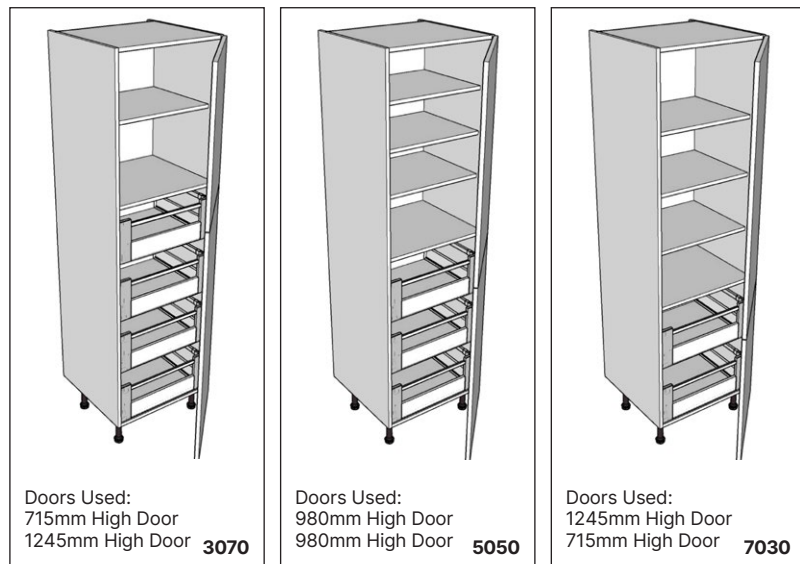

HL and HBR are available as a single door cabinet, supplied with a 1970mm high frontal. Due to range restrictions please contact our Sales Team for further information.

To order just the cabinet (no door, no handles, no hinges) please state the correct code and add a note to say cabinet only. You will be supplied with the 150mm high adjustable plinth legs and shelves.

 **To discuss customising this cabinet please contact the Sales Team for further information.**

Measurements are in millimetres. Unless otherwise stated cabinets are supplied fully assembled (not flat-pack) and include hardware components for installation. Cabinet heights exclude the 150mm high adjustable plinth leg dimension.

Finished Ends

As standard Fusion and Serenity cabinets are manufactured in grey, Concetto is manufactured in anthracite linen and Heritage is manufactured in textured oak. Please see pages 8-9 for cabinet specifications including images of the cabinet colours). Cabinets can be customised to include finished ends.

Finished ends are decor panels installed in place of the standard cabinet material, allowing for a cabinet side (end) to match the door colour. When specifying the finished end requirements of a cabinet you can select left, right, both or none.

Fillers - Base, Wall & Larder

Filler panels are used to fill gaps between cabinets, walls or appliance housings. For example, a gap of 650mm could have been left in your property and you want to install a 600mm wide base cabinet, the filler panel can be cut down by your trades person to fill the 50mm gap.

Standard fillers panels align with the cabinet box, not the door.

When a grained board is used the grain direction will be vertical.

Standard fillers panels are available in all ranges except Fruin, Hayle, Hermitage and Hampton.

To discuss customising options please contact the Sales Team for further information.

Measurements are in millimetres

Base, Wall & Larder

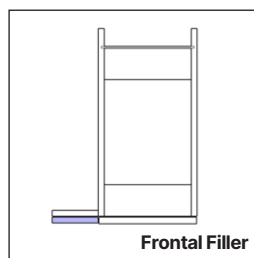

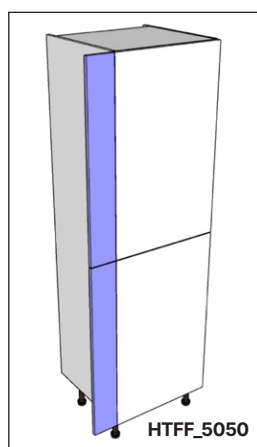

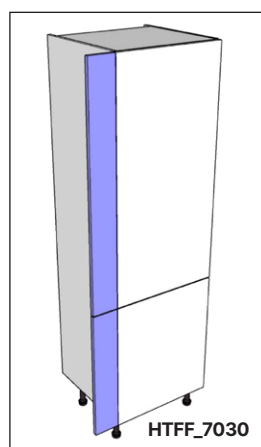

Frontal fillers are made from doors and as such are the same height as the door, for example the 720mm high wall cabinet is supplied with a 715mm high door. A cabinet coloured backing panel is supplied to be attach to the frontal filler allowing the panel to be installed flush with the door.

Frontal filler panels are designed to fit either the left or right side of a cabinet. For instance, if a 600 mm base unit is being installed in a 650 mm gap, a filler panel may be needed between the cabinet and the wall. If the wall is on the left side of the cabinet, the filler panel is considered left-handed. In this case, the finished edge of the panel will be on the right, and the visible edge of the filler (the door edge) will face outward, while the cut edge sits against the wall. In the illustrations provided the fillers are left handed.

The grain direction on frontal fillers will follow the same direction as the door. Frontal fillers are available in all ranges.

Base Frontal Fillers	Code	Panel Size H
Suitable for Base Cabinet 720mm High	BFF140	715mm

Wall Frontal Fillers	Code	Panel Size H
Suitable for Bridging Cabinet 290mm High	WOFF140	285mm
Suitable for Bridging Cabinet 360mm High	HWOFF140	355mm
Suitable for Wall Cabinet 575mm High	WFF140	570mm
Suitable for Wall Cabinet 720mm High	HWFF140	715mm
Suitable for Wall Cabinet 900mm High	TWFF140	895mm

Larder frontal fillers mirror the door split configuration. For example, a frontal filler suitable for a 1970mm high HL060_5050 would comprise of two 980mm high panels, whereas a 1970mm high larder cabinet comprising of a 70/30 door split would require a panel made up of one 715mm high panel and one 1245mm panel.

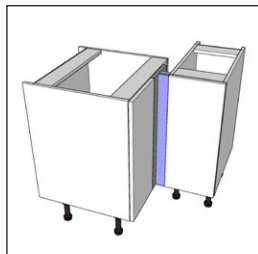

Larder Fillers	Code	Panel Size H
Suitable for Larder Cabinet 1970mm High - 7030 Door Split	HTFF140_7030	1245 & 715
Suitable for Larder Cabinet 1970mm High - 5050 Door Split	HTFF140_5050	2 × 980
Suitable for Larder Cabinet 1970mm High - 3070 Door Split	HTFF140_3070	715 & 1245
Suitable for Larder Cabinet 2150mm High - 4060 Door Split	TTFF140_4060	895 & 1245
Suitable for Larder Cabinet 2150mm High - 6040 Door Split	TTFF140_6040	1245 & 895
Suitable for Larder Cabinet 2150mm High - 5050 Door Split	TTFF140_5050	175 & 2 × 980
Suitable for Larder Cabinet 2150mm High - 7030 Door Split	TTFF140_7030	175, 1245 & 715

Widths vary due to available door sizes, we aim to provide a 147mm wide frontal filler however please check the width available for your range before ordering.

Illustrations are for guidance only.

2 × 895mm

Corner post fillers are made from doors and as such are the same height as the door, for example the 720mm high wall cabinet is supplied with a 715mm high door.

The corner post comprises of two frontal fillers, in the illustration provided the greyed section attached to the corner cabinet is one filler and the blue section which creates the post to attach to the adjoining unit is the second filler. Behind the second filler is a 24mm cabinet coloured post which is installed behind the second filler panel allowing the panel to sit flush with the door.

Corner post fillers are supplied as either left-handed or right-handed components. In the illustrations, the corner cabinets are right-handed, meaning a right-handed corner post is used. With this configuration, the exposed edge of the first frontal filler (the door edge) appears on the left, while the second adjoining filler is presentation-finished on the right. The cut edges of both filler panels remain concealed behind the corner post.

For further information regarding corner cabinet installation please refer to pages 153-156.

The grain direction on frontal fillers will follow the same direction as the door.

Frontal filler corner posts are available in all ranges.

Widths vary due to available door sizes, we aim to provide two 147mm wide frontal fillers however please check the widths available for your range before ordering.

Top Moulding and Light Pelmet

Top moulding (TM) is the decorative trim installed along the top edge of wall cabinets. Lighting pelmet (LP) is the decorative trim installed along the bottom edge of wall cabinets. These trims are often referred to as cornices.

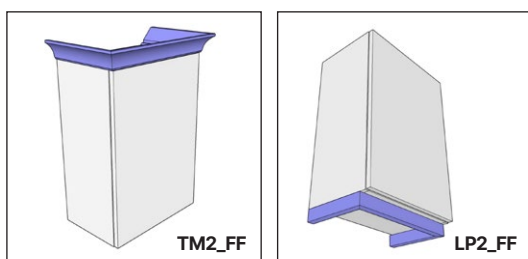

If your property already has cornice installed and you require additional matching materials please inform us upon ordering.

If your property doesn't have cornices and you would like to add these please select the appropriate option for your range.

There are two styles of top moulding (TM) 'traditional' and 'modern'.

The traditional top moulding is usually paired with a shaker door and the modern with slab doors.

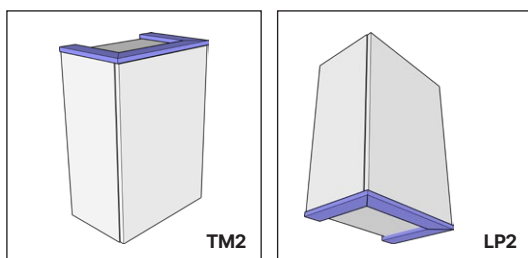

Lighting pelmet (LP) can be used as a modern top moulding (TM) in a shaker kitchen.

Durban, Durness, Feay, Hampton, Hayle & Hermitage

Cornice Frontal Filler (FF)	Code	Size L
Traditional Top Moulding	TM2_FF	3050
Modern Top Moulding	LP2_FF	3050
Lighting Pelmet	LP2_FF	3050

Slab kitchen doors can have 18DBP's installed with wall cabinets, for further information please refer to page 40. Alternatively, the following options are also available.

Avon, Banwell, Bracken, Brent, Cabana, Cadwell, Croft, Dakar, Dakota, Denver, Forss & Fruin

Cornice	Code	Size L
Top Moulding	TM2	2400
Lighting Pelmet	LP2	2400

TM2 and LP2 can be supplied to size using our customisation service. Please note that LP2_FF and LP2_FF can only be supplied at the stated lengths.

To discuss customising options please contact the Sales Team for further information.

The quadra front edge is engineered to help prevent liquid spills from running into drawers or cupboards, offering added protection in everyday use.

The quadra-profile worktop includes Duropal's unique V-groove seal. This patented feature provides enhanced resistance against moisture and steam, helping prolong the life and appearance of the worktop.

Edging strips are not included with worktops, upstands, or splashbacks but can be purchased separately if needed.

When ordering please specify the colour required

 **Laminate worktops can be supplied to size using our customisation service. To discuss customising options please contact the Sales Team for further information**

Kitchen Island Design Guide

Kitchen islands comprise of individual base cabinets that are assembled and secured by your trades person during installation. This modular approach allows for a virtually unlimited range of layout configurations, enabling you to design an island that aligns precisely with your requirements and the dimensions of your space.

A well-designed kitchen island can dramatically improve functionality, workflow, and aesthetics. This guide walks you through the key considerations so you can plan an island that fits your space and lifestyle.

1. Determine the Island's Purpose

Before deciding on size or layout, identify the primary roles your island will serve. Common uses include:

- Prep space: Extra countertop for cooking tasks
- Cooking station: With a cooktop or range
- Cleaning hub: With a sink or dishwasher
- Dining/entertaining: Bar seating, buffet space
- Storage: Cabinets, open shelves, drawers
- Multi-functional: A mix of the above

Your intended use will drive layout, plumbing/electrical needs, and size.

2. Check Your Space Requirements

To keep your kitchen comfortable and functional the following minimum requirements should be considered:

- 910mm minimum walkway clearance around all sides
- 1.7m recommended for work aisles
- 1.2m recommended if multiple cooks use the space

Room Size Guidelines:

- A kitchen should be at least **3.65m x 3.65m** to accommodate a small island.

If space is tight, consider a peninsula island.

3. Ideal Island Dimensions

Allowing 600mm to 800mm of island width per seated person ensures comfortable spacing without crowding.

- 600mm works for compact kitchens or casual seating.
- 750–800 mm is ideal for long meals, homework spaces, or where extra elbow room is preferred.

An unobstructed space of 250mm–300mm underneath the countertop provides adequate knee and leg clearance when seated.

If using thicker countertops or decorative panels, ensure these do not reduce the usable clearance.

For deep comfort, especially for bar seating, many designers aim closer to 300mm.

Number of Persons	Required Width
2	1200mm - 1600mm
3	1800mm - 2400mm
4	2400mm - 3200mm
5	3000mm - 4000mm

4. Island Types

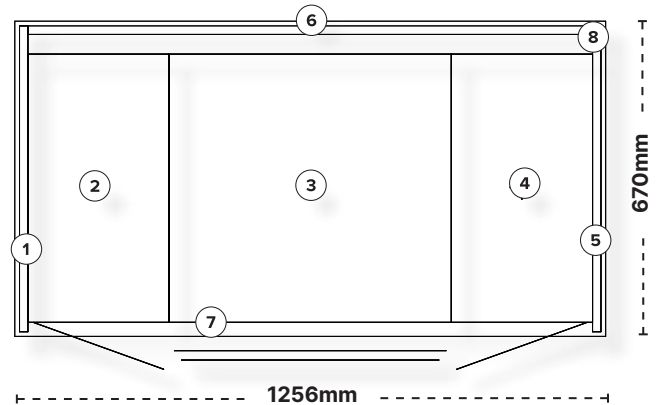

Common Names	Description
Freestanding Island	is a separate unit with access on all four sides, ideal for larger kitchens
Peninsula Island	is attached to a wall or cabinet on one side, offering three-sided access and a good option for smaller or open-plan spaces
Breakfast Bar Island	Both the freestanding and peninsula island can function as a breakfast bar by incorporating seating and an overhang, but this is a function, not a separate type of island, with its own specific requirements for space and seating.

Island << Freestanding

2026

An island is a freestanding counter or cabinet sits in the middle of the kitchen. It provides extra workspace and storage, and can also be used for casual meals or as a social spot for family and friends. It works best in larger kitchens with enough room to move around it comfortably.

As kitchen islands comprise of individual base cabinets that are assembled and secured by your trades person during installation you will need to specify the cabinets required when ordering; however to give you a starting point the following islands are our most requested designs.

① 18BPEP900_650

③ B060G2

⑤ 18BPEP900_650

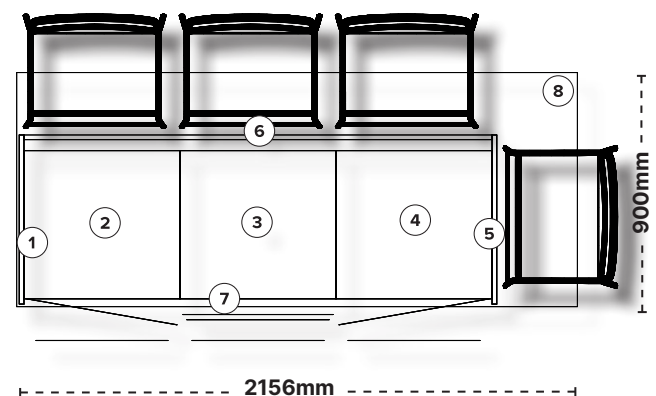

⑦ PL150

② B030AF LH

④ B030AF RH

⑥ 18BUBP

⑧ W4067D

① 18BPEP900_650

③ B060DG3

⑤ 18BPEP900_650

⑦ PL150

② B060B LH

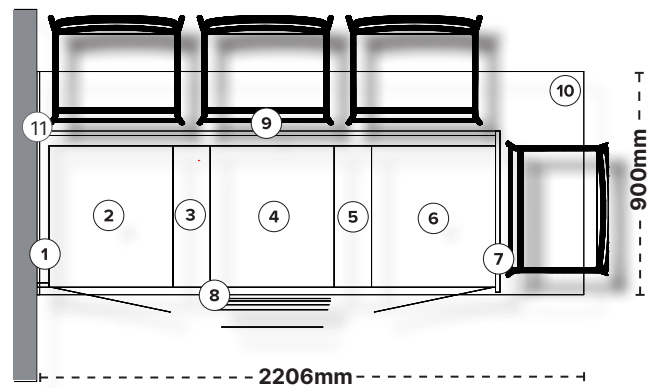

④ B060B RH

⑥ 18BUBP

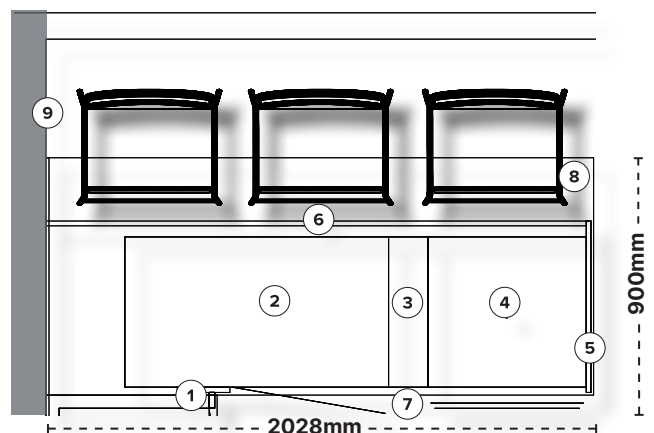

⑧ W409D

Similar to an island, but connected to the main counter or wall, forming an extended "peninsula." It adds workspace and storage without needing as much floor space as a standalone island. Some designs also allow for seating (as is shown), like a breakfast bar.

Designed to be installed in the top 140mm or 175mm high Legra drawer boxes.

To identify the size required, measure the external drawer front to establish the drawer pack width. For example, the ZLCT1000 is suitable for a 1000mm wide drawer pack.

CODE: ZLCT450
WIDTH: 371 mm
DEPTH: 473 mm

CODE: ZLCT500
WIDTH: 421 mm
DEPTH: 473 mm

CODE: ZLCT600
WIDTH: 521 mm
DEPTH: 473 mm

Cutlery tray - Concetto and Heritage cabinets

CODE: ZLCT800
WIDTH: 721 mm
DEPTH: 473 mm

CODE: ZLCT900
WIDTH: 821 mm
DEPTH: 473 mm

CODE: ZLCT1000
WIDTH: 921 mm
DEPTH: 473 mm

Designed to sit in the concealed internal top Legra drawer boxes.

To identify the size required, measure the external drawer front to establish the drawer pack width. For example, the ZLCT900_450 is suitable for a 900mm wide drawer pack.

If you intend to measure the internal drawer dimensions ensure you measure the bottom of the drawer. Measuring the top of the drawer will result in a depth measuring 114mm.

CODE: ZLCT450_450
WIDTH: 371 mm
DEPTH: 423 mm

CODE: ZLCT500_450
WIDTH: 421 mm
DEPTH: 423 mm

Corner base cabinet storage mechanisms are supplied uninstalled and need to be assembled by your tradesperson. Mechanisms can be installed in a standard corner base cabinet by removing the adjustable shelf. When ordering a base corner cabinet for a mechanism please state this on the enquiry and we can supply the cabinet undrilled for the shelf.

LeMans vs Moveboard

The LeMans tray swings almost entirely out of the cabinet, offering full exposure of the shelf. The Moveboard, by contrast, extends outward but remains partially inside the cabinet, making it a more compact option—often better for tight spaces or installations where door clearance is limited.

LeMans

The LeMans mechanism is a storage solution for blind-corner kitchen cabinets. It uses two independent, kidney-shaped shelves and each shelf swings smoothly out of the cabinet and around the corner, making it easy to access items that would otherwise be hard to reach.

The handing of the mechanism is determined by the position of the corner cabinet door when the cabinet is closed.

Left-handed mechanism: The corner cabinet door is on the left, and the blank/void section is on the right.

Right-handed mechanism: The corner cabinet door is on the right, and the blank/void section is on the left.

Mechanisms are supplied with an axle and two trays. A soft close mechanism can be purchased separately but we don't offer additional shelves or spare parts.

Larder Cabinet Storage

2026

Larder cabinet storage mechanisms are supplied uninstalled and need to be assembled by your tradesperson. When ordering a larder cabinet for a mechanism please state this on the enquiry as we need to supply the standard cabinet without the three fixed shelves.

Pull-Out Dispensa Larder

Tandem Solo Larder

Tandem Side Larder

Kesseböhmer - Dispensa Pull-Out

ARENA PURE

CODE: KAPLF300FEA 300mm Wide

CODE: KAPLF400FEA 400mm Wide

CODE: KTLSOFTOPEN Softopen adapter for a Dispensa larder

Accessible with a single, smooth pull-out motion, this adjustable-height system is designed for tall kitchen cabinets with an internal height between 1800-2200 mm and a minimum cabinet depth of 500 mm.

Please note that, as with all pull-out kitchen larder mechanisms, the baskets must be installed according to the lowest adjustable height of the system.

The pull-out mechanism and five trays are included. Please be aware that spare parts or additional shelves are not available.

Kesseböhmer - Tandem Solo

ARENA PURE

CODE: KAPTSFH500 500mm Wide

CODE: KAPTAFH600 600mm Wide

Engineered to fit tall cabinets with a minimum height of 1800mm and depth of 495mm, this premium system is perfect for hinged-door units. Featuring six spacious, easy-access trays, it ensures that no space is wasted and every item has its place.

Please note we don't offer additional trays or spare parts.

Kesseböhmer - Tandem Side

ARENA PURE

CODE: KAPTDFH500A 500mm Wide

CODE: KAPTDFH600A 600mm Wide

The six height-adjustable door shelves give users twice the visibility and accessibility of a standard cabinet. Similar to a refrigerator, the Tandem Side allows users to easily see and reach items at the back of the cabinet-items that would otherwise be hidden, hard to access, or ultimately wasted.

Please note that we do not offer additional trays or spare parts.

Base corner units shown are left hand (LH) versions.

The unit width is displayed in the code, for example 080 means the width of the unit is 800mm. The void space allows for alignment with the adjoining unit.

A base corner post (BCPFF145) is required for installation.

Please note - All sizes are in millimeters. Unit sizes are subject to tolerances, therefore dimensions should be only used as a guideline.

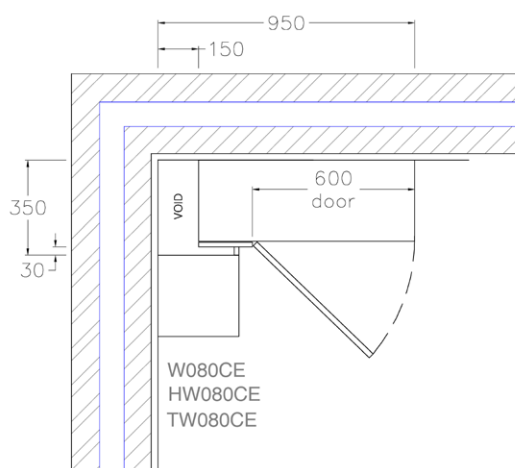

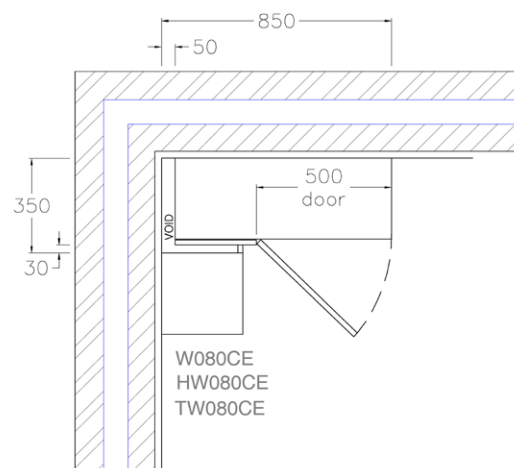

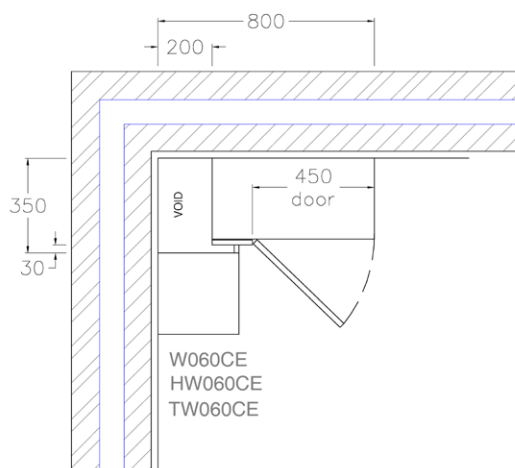

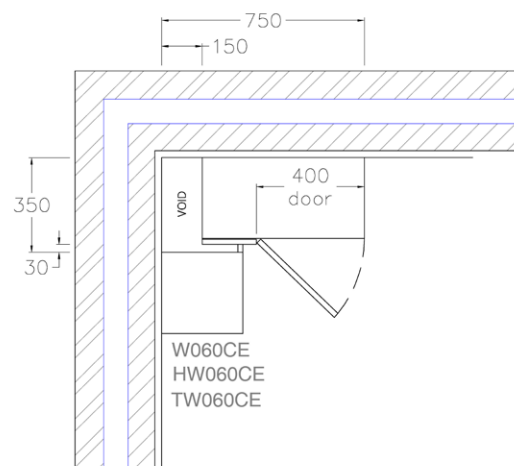

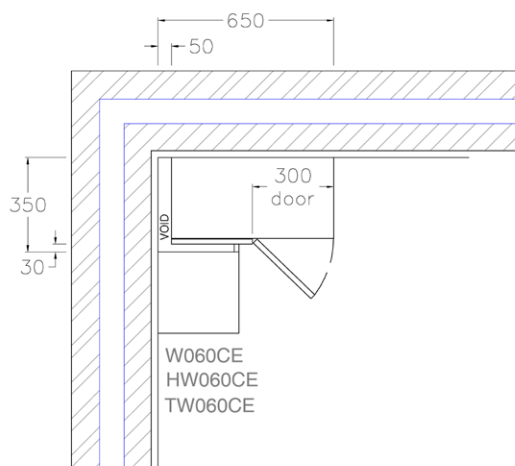

Base corner units shown are left hand (LH) versions.

The unit width is displayed in the code, for example 110 means the width of the unit is 1000mm. The void space allows for alignment with the adjoining unit.

A base corner post (BCPFF145) is required for installation.

Please note - All sizes are in millimeters. Unit sizes are subject to tolerances, therefore dimensions should be only used as a guideline.

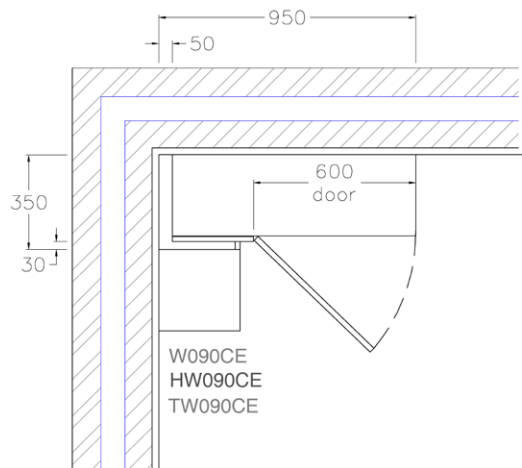

Wall corner units shown are left hand (LH) versions.

The unit width is displayed in the code, for example 060 means the width of the unit is 600mm. The void space allows for alignment with the adjoining unit.

A base corner post (**CPFF145) is required for installation.

Please note - All sizes are in millimeters. Unit sizes are subject to tolerances, therefore dimensions should be only used as a guideline.

Wall corner units shown are left hand (LH) versions.

The unit width is displayed in the code, for example 090 means the width of the unit is 900mm. The void space allows for alignment with the adjoining unit.

A base corner post (**CPFF145) is required for installation.

Please note - All sizes are in millimeters. Unit sizes are subject to tolerances, therefore dimensions should be only used as a guideline.
